How to install fr legends mods ios

Signed Up Jan 27, 2019 Messages 3,523 Points 113 Bundle ID: com.fengjilley.frlegends FR Legends 0.1.2 time_update iName: FR LEGENDS Hack Mod for iOS Bundle ID: com.fengjilley.frlegends iTunes Store Link: FR Legends Version: 0.1.2 Internet required: YES Size: 42.44 Mb Categories: Racing Game Price: Free FR LEGENDS Hack Features: Buy something in the game for free! Preview Mod: FR LEGENDS is all about driving! From driving legendary FR (front-engine, rear-wheel drive) operating cars on the world's most iconic circuits, to customizing everything on your car, including engine swaps and wide-body kits. For the first time ever, a mobile game that lets you have tandem operation battles with AI drivers, unique scoring systems based on real world competition judging rules. Come experience the spirit of driving and car culture in FR LEGENDS! Installation InstructionsSTEP 1: Download it for hacked . IPA file from the link above to your computer. STEP 2: Download Cydia Impactor and extract the archive. STEP 3: Open/run Cydia clout on your computer, and then connect the iOS device, and wait until the device name appears on Cydia Impactor.STEP 4: When your iDevice appears, drag modded . IPA file you have downloaded and release it inside the Cydia Impactor program. STEP 5: You will now be asked to enter your iTunes/Apples ID email login & then your password. Go ahead and enter the necessary information. NOTE: It is suggested that you use a one-time Apple ID for this. STEP 6: Wait for Cydia Impactor to finish sideloading/installing hacked IPA. STEP 7: When setup is complete and you can view the app on your Home screen, now go to your settings -> General -> Profiles & Device Management. Once there, tap the email you entered from STEP 5, and then tap 'Trust '. STEP 8: Now go to your Home screen and open the newly installed IPA, and everything should work out fine. NOTE: For free Apple Developer accounts, repeat this process every 7 years. If you have any questions or problems, comment problem below and we will do our best to help! If the hack works for you, post your feedback below and help other colleagues who encounter problems. 1. Find your game packpage name, Use an app on your phone. - Install Package Name Viewer 2.0 from the Play Store. - Scroll through the app list to find the app you need the package name for. You can also use the search button to quickly search for a specific program or game. The package name appears just below the name app. 2. Back up your data. - Open file manager find Android folder! - Go to Android folder you will see two Folder name data and obb. - Open data folder and find your packpage name game you want to Kepp account (Example: com.tencent.ig). - Rename it to what you want (Example: com.tencent.ig -> rename it to com.tencent.ig.keepdata) 3. Remove old version and install new versions. 4. Back to file management, Unrename your packpage you renamed in steps (Exam : com.tencent.ig.keepdata -> rename it to com.tencent.ig). 5. Open games and enjoy MOD with your save data! There are a number of mods next to the mobile game: FR Legends, vehicles, engines, wheels, liveries, etc. This is the post explaining how to download and install mods for the game. NOTE: iOS devices must be jailbroken to install mods. E30 Wagon Mod by: Nimo.co Download in description)You will need 3 additional apps in addition to FR Legends for the mod of the game. Files / Files Manager: (Downloaded from Play Store) You will need to make the downloaded mod files easy to find. Your downloaded mod should go to the download file automatically, if so, open your file manager, find and open your downloads, and then create a folder called FR Legends Mods that's where you want to move your downloaded toward files to. This simplifies the process by creating an area specific to your game modes. Create 2 additional folders in the FR Legends Mods folder. Modded & Backup. You will place your mods in the Modded folder. The Backup folder is where you keep the original game file file that you replace to insert the mod. If your download doesn't go to your downloads, use your file manager to move it there and then follow the process above. (Most phones come with a standard file manager app, if yours doesn't, download one from your App Store.) RAR: (Downloaded from link) be used to extract the necessary files from mod you have downloaded. Download the app from the link above or from the App Store (I downloaded from the link to avoid ads/lite versions for sure) Once you have it installed on your phone, you can use it to extract your mod files and prepare to insert them into the game. Open the RAR app and go to your downloads -- FR Legends Mods -- (click mod then click on the icon above with the up arrow) Extract your file. Once it's extracted, you can move to the next and last app. APK Editor: (Downloaded from link) You must download a newer version of the app from the link. Google updated their policy a while ago, making the app's Build feature unavailable if it was downloaded through the Play Store. I have version 1.8.20After the app is installed on your phone, open it. You will be greeted by the menu screen, click Select Apk from App, scroll down and find FR Legends App, click on it and another menu will pop up. Click Simple Editing, then go to assets -- bins -- data. Now you must be on the page you want to enter your mods. The mods you downloaded replace the corresponding matching file. You will have to look for the first 4 characters in file.ex: if your mod file is you only need to remember 6d20, mods are organized 0-9, A-H so you would roll scroll to 6's section and find 6d when found Make sure the next 2 character match. Otherwise, you will enter a file incorrectly. You can either remember it from reading it in your file manager, RAR, or in the APK Editor on the data page for fr legends in-app, How to :(click the replace icon (notepad and pen) on a file, go to your downloads -- FR Legends Mods -- Do -- fine the mods you enter and remember the first 4 characters, and then click the Close button at the bottom of the window)Backup Folder: Click Save icon (right of replace icon) on the in-game file you want to replace. Save this to the Backup folder that you created earlier. IT'S IMPORTANT. Some files you install may not look/work the way you want, and you may want to uninstall them. Keeping the original files of those you replaced will keep you from having to delete and download the game again, just in case. Once you've remembered the file and you've found the corresponding file on the data page, click the replace (notepad and pen) icon, go to the matching file in your FR Legends Mods download file, and click it. File substitution complete. Repeat this if you have more than 1 file for your mod. When you're done, click the Save button. The app will start working your mod into the game. (Takes 5-10 minutes) after that FR Legends will begin staging and then you need to uninstall FR Legends you have installed already then can install your modded version. TURN OFF YOUR PHONES ROTATION DURING THE WORKING PROCESS, IF YOUR PHONE CHANGES TO LANDSCAPE WHILE YOU WORK IT WILL CANCEL THE PROCESS AND YOU WILL HAVE TO REWORK IT. Also make sure you have space. Mods typically don't take up a lot of space, but if your phone is approaching its storage capacity then the app won't download back to your phone and you'll need to clear space and rework the app again. I think that's all. If you have any questions or concerns feel free to contact me through comments or pm.
